INFORMATION SERVICE PROVIDING SYSTEM AND METHOD OF SAME

ABSTRACT OF THE DISCLOSURE

A bidirectional information service providing system comprised of an uplink and a downlink of a satellite communication network comprising a transmitting means for transmitting content information to a user by a downlink, a receiving means for receiving a request signal from a user by an uplink in a predetermined time band, and a control means for making the transmitting means transmit certain content information at a certain time in response to the request from the user received by the receiving means.
